Easy guide to product selection by appliance type

We have developed an easy guide to ordering a suitable chimney pot for your chosen appliance. Our new colour coded icons below are shown against each product throughout the price list, making selection a quick and easy process.

Solid Fuel Appliance
- Outlet size up to 125mm dia

Open Decorative Fuel Effect Appliance
- Outlet size up to 150mm dia

Solid Fuel Enclosed Appliance
- Redundant Flue

Note: Our product appliance guide is intended for guidance only, please consult with an approved appliance installer before making your purchase.

Product colours

The Red Bank clayware product range is manufactured in three unique colours:

- Red
- Buff
- Blue Black / Slate Bodymix*

* Slate Bodymix only available for Ridge Tiles & Finials

For individual product colour availability, pallet quantities and technical specification, visit forterra.co.uk/redbank-selector

All dimensions are in mm, drawings not to scale and all sizes nominal. The colours in this brochure are as true as can be obtained by the normal printing process. Red Bank is committed to a programme of continuous product development and reserve the right to alter specifications without prior notification.

For further product information or assistance please telephone our sales team on 01530 273 737.
Red Bank has been producing high quality chimney pots for over 100 years, and offer an unrivalled range of products that add distinction and character to any new build, restoration or renovation project.

We also offer a bespoke products service for the listed building and renovation sector. Our highly skilled and experienced craftsmen can produce bespoke ridge tiles, roof finials, chimney pots, copings, and many other products that are not available off-the-shelf.

For more information call us on 01530 273 737

Clay Ridge Tiles & Finials

Red Bank manufacture ridge tiles and fitments for all types of building projects. The flexibility of Red Bank’s manufacturing process ensures that the most unusual or one off designs can be matched. Skilled craftsmen can also reproduce the most intricate patterns, satisfying the demands of conservationists.

Continuous investment ensures that products can be supplied from Red Bank to all parts of the country, with the minimum of delay.

---

**Standard Ridge Roof Angles**

Roof Angles are usually given by their pitch (the angle at the eaves). The main ridge angle is the internal angle at the apex (180° minus twice roof pitch).

As a guide the table below gives the most suitable standard ridge angle for use on hips.

<table>
<thead>
<tr>
<th>Main Apex</th>
<th>Hip Angle</th>
<th>Span Length</th>
<th>Wing Length</th>
<th>Half Round Span</th>
</tr>
</thead>
<tbody>
<tr>
<td>75°</td>

Dry Fix Ventilated Ridge & Hip System

Dry Fix Ridge System

Red Bank’s universal dry fixed ventilated ridge and hip system is manufactured entirely from aluminium, it overcomes the durability and weathering problems associated with other fabric based roll ridge systems.

- All aluminium construction
- Suits all tile profiles including all ridge and hip tile designs
- Quick and easy to install
- Ventilated and driving rain resistant
- Available in grey or terracotta, 300mm wide
- Handy 6m pack

Our system stands above all other dry fixed ridge systems in its class. An innovative new product, which has a no union design allowing a completely uninterrupted air flow, yet maintaining total water resistance.

Exploiting the properties of coated aluminium gives our system market leading performance. Builders benefit from its AA fire rating enabling unrestricted use, fitting a majority of ridges and excellent design life in excess of 30 years.

The coated aluminium used is a durable, lightweight, malleable metal which is remarkable in its ability to resist corrosion. It has no need for cumbersome ridge unions to seal the gaps between the ridge tiles, which enable full ventilation to be achieved, even on slate roofs.

Red Bank’s Dry Fix Ridge System gives builders the ability to meet Building Regulations Approved Document C 2004 which stipulates requirements for resistance to moisture penetration, and BS 5250:2011 which defines the level of air openness required of the roof covering. Install continuously to provide ventilation area equivalent to 5000mm²/m².

Available as a handy 6m pack in either terracotta or grey, and is ideal for most applications. Stainless steel clips provide mechanical fixing and even ridge tile spacing.

All finial components should be mortared together. 10mm Dia Stainless Steel Rod must be threaded through all finial components and secured to the roof timbers.

Note: Allowance must be made for expansion of the rod.

Red Bank's Dry Fix Ventilated Ridge & Hip System gives builders the ability to meet Building Regulations Approved Document C 2004 which stipulates requirements for resistance to moisture penetration, and BS 5250:2011 which defines the level of air openness required of the roof covering. Install continuously to provide ventilation area equivalent to 5000mm²/m².

Available as a handy 6m pack in either terracotta or grey, and is ideal for most applications. Stainless steel clips provide mechanical fixing and even ridge tile spacing.

**Dry Fix Ventilated Ridge & Hip System**

**Dry Fix Ridge Fixing Instructions**

1. For unventilated dry ridge applications, install the underlay as normal. For ventilated dry ridge applications, lay the underlay ensuring it is set back 30mm short of the apex on both sides of the roof, to allow for ventilation. Don’t fix top tiling batten at this stage.

2. Fix galvanised ridge batten straps to each truss or rafter using clout nails. Using 25mm tiling battens make the ridge batten. For most tile profiles two to three battens will suffice. An extra batten may be necessary if a ridge board already exists. Secure the battens in place with ridge batten strap supplied, overlapping the arms as necessary. Fix with clout head nails.

3. Fix the top tiling batten ensuring an air gap is maintained. Complete tiling as normal.

4. Unroll the Dry Fix Ventilated Ridge & Hip System centrally over the ridge batten, ensuring a 75mm overlap on each side of the top course of tiles. Secure in place every 300mm with clout nails or staples. Any joins should be overlapped by a minimum of 75mm.

5. Remove protective paper from the adhesive strip and press down firmly onto dry, clean tiles all the way along the ridge. For deeply profiled tiles, additional care is needed to work the Dry Fix Ventilated Ridge & Hip System into the pans. An optional screw sleeve is included if the user perceives that there may be a risk of light bleed between ridge tiles.

6. Locate the block end ridge tile over the centre of the roll and secure it with a screw (it may be necessary to drill a hole in the ridge approximately 30-40mm from the block end for this purpose). Continue along the ridge, fixing each ridge tile with the plates and screws provided. A hip batten supports in 50mm x 50mm timber should be screw fixed at the eaves and apex, and spaced along the line of the hip rafter, in between the tiling batten spaces as shown. Supports could be constructed from 2 x 25mm tiling battens.

**Dry Fix Hip Fixing Instructions**

1. For unventilated dry hip applications, install the underlay as normal. For ventilated dry hip applications, lay the underlay and battens, cutting the underlay 30mm short of the hip on both sides of the hip, to allow for ventilation. Ensure the ends of the battens are securely fixed where they meet the hip.

2. Hip batten supports in 50mm x 50mm timber should be screw fixed at the eaves and apex, and spaced along the line of the hip rafter, in between the tiling batten spaces as shown. A hip carrier is available to assist with aligning the hip tiles when used with profiled tiles (available to order separately).

3. Screw fix hip batten constructed from 50 x 50mm timber to the supports. Complete tiling, cutting the tiles neatly against the hip batten. No cut tiles should be more than 30mm from the hip batten. Small tile cuts should be secured mechanically or by using a proprietary adhesive or other fixing method.

4. Working from the eaves, secure the Dry Fix Ventilated Ridge & Hip System in place centrally over the hip batten using corrosion resistant nails or staples. Roll out along the hip batten and fix at 300mm centres. Remove protective paper from the adhesive strip and press down firmly onto dry, clean tiles all the way up both sides of the hip. A hip carrier is available to assist with aligning the hip tiles when used with profiled tiles (available to order separately).

5. Using a 100mm screw provided, secure the block end hip tile to the hip batten (it may be necessary to drill a hole in the hip tile approximately 30-40mm from the block end for this purpose). Fix hip tiles up to the apex using the 100mm screws and fixing plates provided. An optional screw sleeve is included if the user perceives that there may be a risk of light bleed between hip tiles.

6. At the apex close mitre the hip and ridge tiles, drill and secure to the hip and ridge batten using the 100mm screws provided. If the Dry Fix Ventilated Ridge & Hip System is not used on the ridge, continue the roll 200mm onto the ridge, in place of the standard lead saddle detail.
Clay Ridge & Gas Flue Terminals

Suitability & Application Notes

The design profile and outlet dimensions of the chimney pot or flue terminal should preferably equal to the shape and cross-sectional area of the flue lining. Minimum recommended dimensions are dependent on the size of the Fireplace opening, size of the flue lining or appliance outlet, and the type of fuel and/ or appliance. Chimney pots and flue terminals suitable for use with solid fuel open fires and closed appliances. Fireplaces with an opening of up to 500mm x 550mm minimum 200mm diameter or equivalent square/rectangular cross sectional area with no dimension less than 175mm.

Fireplaces with an opening in excess of 500mm x 550mm flue and terminal outlet equivalent to 15% of the area of the fireplace opening with no dimension less than 200mm.

Chimney pots and flue terminals suitable for use with natural draft open-flued gas burning appliances. Flue sizes up to 170mm diameter should be fitted with an approved gas terminal complying with BS 710:1993 and BS 2869:1995 as shown on pages 21 and 22. Flue sizes in excess of 170mm diameter may be fitted with suitable terminals to prevent ingress if the total free area of the outlets is at least twice the cross-sectional area of the flue.

Chimney pots and flue terminals included on pages 25-26 are suitable for use with solid fuel open fires and appliances dependent on the cross-sectional area of the outlet.

Minimum dimensions should be the same size or equivalent to the cross-sectional area of the appliance flue outlet. Suitable terminals may be used to prevent ingress if the total free area of the outlets is at least twice the cross-sectional area of the flue.

The majority of chimney pots and flue terminals are for guidance only. Some traditional patterns may not meet all current requirements but have time proven performance characteristics.

Owing to the diversity in design and varied application, the notes provided on limited and suitable application are for guidance only. Specifiers and installers must ensure that all products are suitable for the intended application and meet all appropriate regulations and installation requirements.

If further assistance is required please contact Red Bank's Technical Services Department on 0330 123 1018.
